

5-13 Angular Momentum, the Moment of Inertia (Vol. I, Chs. 18 and 19)

***13-1** A straight, uniform wire of length L and mass M is bent at its midpoint to form the angle θ . What is its moment of inertia for an axis passing through the point A, perpendicular to the plane determined by the bent wire?

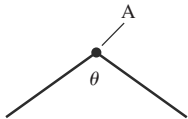

FIGURE 13-1

***13-2** A mass string wound around cylinder of mass pivoted on bearing friction as shown acceleration of m
